---Readability Review---

Author of the code review: Chris Johnson
Date of the code review: 4/21/2022
Sprint number: 5

File being reviewed: MovingCamera.cs

Author of the .cs file being reviewed: Kevin Nguyen

Specific comments on what is readable and what is not:
Just by reading over the code once, I can easily tell what's happening. The variable's names are descriptive and the code is compact and easy to read, He knows what he is trying to do in this code and does it quickly and efficiently.

---Code Quality Review---

Specific comments on code quality:
The logic used is concise and easy to read, especially in the AnimateRoomTransition method. His switch logic explains what he is expecting the camera to do. A possible refactor could be done here by reducing the switch statement to its own method. Also maybe he can use a comment in the draw method to explain why there is no code there
